

Commitment to Greenhouse Gas Emissions Reduction

Index Analytics shares the federal government's goal of reducing greenhouse gas (GHG) emissions while maintaining uninterrupted operations in service of our clients.

Index Analytics is an ISO 14001 certified company that strongly values the responsible use of natural resources and the preservation of these resources for future generations. Index Analytics recognizes the detrimental effects GHG emissions can have on the environment and on our communities. From the removal of disposable plastics in our facility to the study of our GHG emissions, Index is working to reduce our carbon footprint as a company, as well as our individual employees' carbon footprint.

We believe that challenging ourselves to reduce our carbon footprint creates opportunities for innovation and progress, empowering our diverse group of employees to take this progress beyond the confines of the Index Analytics culture and into their communities, which in turn empowers those communities.

Reduction Targets

Index Analytics is committed to working with our building managers and owners to further reduce our GHG emissions. In 2023, we began working to establish annual reduction targets. By establishing these targets, we intend to meet net-zero emissions in or before 2033.
